Backup Tutorial

- ✓ Files Backup
- ✓ Database backup

How to create backup of your complete hosting account?

A Full Backup will allow you to create an archive of all the files and configurations on your website. You can only use this to move your account to another server, or to keep a local copy of your files. You cannot restore Full Backups through your cPanel interface.

1. Login to your cpanel at www.yourdomain.com/cpanel
2. Click on the backups

3. Click on the "Download or Generate a full website backup button"

Backups allow you to download (to your computer) a zipped copy of either your entire site (your home directory, email forwarders configuration, email filters configuration) or one of the previously mentioned parts. Not automatically scheduled backups. Automatically scheduled backups need to be enabled by the administrator.

Full Backup

A full backup includes all of the files in your home directory, your MySQL Databases, and your email. You can backup your account to preserve your data or use a backup file to move your account to another host.

Include Drop Table?

Check this if you want your backup to overwrite existing data if used to restore.

**Include Structure?**

This is critical for creating the database structure for the data to be imported into.

**Include Data?**

This includes all your store inventory including products, customers etc which is imported into the database core structure.
